PROFESSIONAL SUMMARY

Software engineer with 3+ years of experience building backend systems, data platforms and Generative AI applications for enterprise clients across manufacturing, healthcare and retail. Experienced in Go and FastAPI backend development, distributed data pipelines, cloud ETL, LLM-powered document intelligence and text-to-SQL systems. Strong experience with RBAC, SSO, external-system integrations, PostgreSQL and Snowflake, with ownership spanning architecture, implementation and technical delivery.

TECHNICAL SKILLS

- **Programming Languages:** Python, Go (Golang), SQL, Next.js.
- **Backend & APIs:** FastAPI, Flask, REST APIs, Async Python, Celery, GORM, JWT, OAuth, Okta SSO, RBAC, Nginx.
- **Generative AI:** LLM Applications, RAG, Prompt Engineering, OpenAI, Vector Databases, Text-to-SQL, LLM Document Extraction, PyMuPDF4LLM, SQLGlot.
- **Data Engineering:** PySpark, Databricks, Apache Kafka, Apache Airflow, Matillion, Azure Event Hubs, ETL/ELT, Medallion Architecture, Data Validation.
- **Databases:** Snowflake, PostgreSQL, MongoDB, MySQL, Redis.
- **Cloud & DevOps:** AWS (Lambda, S3, EC2, CodeBuild, CodePipeline, CodeDeploy), Docker, Docker Compose, CI/CD, Git, GitHub.
- **Tools & Integration:** Postman, Workato (Embedded, Custom SDK).

PROFESSIONAL EXPERIENCE

DynPro India Pvt. Ltd. **Jun 2023 – Present**
Consultant – AI Augmented Analytics *Pune, Maharashtra, India*

- **Havells (Data Platform):** Optimized PySpark aggregation workloads on Databricks, improving processing efficiency by 95%; engineered a Flask ingestion service using Redis and Celery workers to stream device data from Azure Event Hubs and Apache Kafka into MongoDB for near real-time reporting.
- **Kairos (Cloud ETL):** Built Matillion ETL pipelines to load AWS S3 data into Snowflake for multiple healthcare clients and automated Airflow DAG deployment on EC2 through CodeBuild, CodePipeline and CodeDeploy, eliminating manual release steps.
- **Mercell (Data Orchestration):** Developed Snowflake stored procedures and scheduled tasks to orchestrate JIRA and NetSuite integrations, transforming nested JSON across raw, operational and reporting layers.
- **DYNVIZ (Backend):** Designed and implemented RESTful CRUD APIs across 10+ modules in Go using GORM; introduced concurrent PostgreSQL metadata discovery with goroutines, increasing throughput by 20%.
- **Conversational Query Engine (GenAI):** Engineered a FastAPI backend that generated SQL from natural-language requests across multiple LLMs, grounding generation with a governed data dictionary, validating SQL with SQLGlot and executing queries on Snowflake under fine-grained RBAC.
- **Revlon POC (AI):** Optimized a local LLM PDF extraction pipeline using PyMuPDF4LLM, increasing accuracy to 90% and reducing execution time by 70%; built a document-to-JSON framework with OpenAI and a FastAPI backend serving KPIs to a Data Stewards UI.
- **Penguin POC (Data Quality):** Validated Salesforce-to-Snowflake Medallion pipelines through completeness, duplicate and orphan-record checks, and verified 11+ ThoughtSpot dashboards against source queries.
- **Workato (Integrations):** Designed Workato integration recipes using HTTP and custom SDK connectors and implemented the Autonomous Operations Framework for standardized error handling.

KEY ARCHITECTURE & DEVELOPMENT PROJECTS

Field Service Order Platform – McCarthy Tire Service *Cloud Architecture, Okta SSO, IBM i*

- Co-owned end-to-end architecture across 17 modules, designing a dynamic rule engine for runtime form rendering and implementing SLA validation logic for field service operations.
- Engineered the complete Dispatcher persona module with 4 real-time synchronous IBM i (AS/400) touchpoints, persisting validation fields to shared tables and returning work order numbers directly from the legacy ERP.
- Built high-reliability backend services with structured logging and comprehensive test coverage; developed the Admin persona module with authentication and fine-grained RBAC secured through Okta SSO.
- Mentored and guided 3 junior engineers through development, conducting code reviews and aligning implementation with enterprise standards.

ARIA – Algorithmic Trading Engine & Real-Time P&L Dashboard *Go, IBKR API, Python, AWS S3*

- Extended a Go trading engine integrated with Interactive Brokers through IB Gateway as sole developer, implementing WebSocket reconnection, 5-second bar subscriptions, dual-bracket order placement, trailing-stop watcher mode and GTC order lifecycle management.
- Backtested momentum-exhaustion and FVG strategies on MES/M2K futures and USDCAD forex in Python, sweeping EMA lengths, body and wick filters, trailing-stop activation levels and tick-based stop offsets across 1m, 5m and 1h timeframes.
- Built a real-time P&L dashboard over S3 trade logs with daily, weekly and monthly equity curves, per-direction breakdowns and live streaming updates; adapted the system during a client-directed pivot from forex to MES futures, recalibrating order geometry and tick rounding for a 0.25 tick structure in live paper trading.

FRANFLOW – Dynamic Access Management *Hierarchical RBAC, Full-Stack Development*

- Designed a hierarchical RBAC model spanning 3 organizational levels and 7+ roles with per-feature and per-action permission granularity.
- Built a custom role creation workflow enabling administrators to configure access through a dynamic permission matrix without developer intervention.
- Rendered navigation, action buttons and page sections dynamically from cached permissions, eliminating hard-coded access conditionals and enforcing scope-based data isolation across middleware and database layers.

Cisco Sales Expansion Dashboard *Next.js 14, TypeScript, React, REST APIs*

- Developed an AI-driven opportunity prioritization dashboard with Kanban pipeline views and multi-dimensional filtering across deal size, stage, customer tier and product family, reducing the time required to identify upsell and cross-sell opportunities.
- Implemented three-tier drill-down navigation with modal deep-dives covering buying signals and product recommendations, supported by a synthetic data architecture and Next.js REST API layer for stakeholder demonstrations ahead of production Snowflake integration.

EDUCATION

AMC Engineering College **Aug 2018 – Aug 2022**

Bachelor of Engineering (B.E.), Computer Science and Engineering – CGPA: 7.76/10 *Bengaluru, Karnataka, India*
